Baby's first flight, Atlanta to Paris, France...I took her from this:and eventually to this: I think it's pretty great; I might even have some fun cutting out the engine when I get her a helmet. One more picture:Avery offered to paint her before I took her out, but I told her that since she was only going to be used for two short flights (and since I was going to put the rearmost seat in this position where I could add a bright warning color), I thought she'd look just fine in her olive drab. Yeah, it was easy. The baby went down uneventfully and she seemed to be quite at ease on her first flight. I was very, very happy with it. A few more shots:When I got home, I found it necessary to flip the wing a bit to account

for the missing baggage pocket and to make it harder to break her down. I might try to find a way to rip off the door, but that will be for another flight. The only issue I have so far is that I put a bit too much strength in the rivet holes; the only flaw. But it can be easily fixed. The one thing I'd love to improve on is the avionics; it's pretty tough to find a big radio from around \$30 that is small enough and light enough to hold on her back. I'm open to suggestions, though. Yep, that's pretty close! Did you cut it up from the original? No? Just cold-cut foam board? Good. My goal was to find a way to rework this so that the whole thing would weigh less and be somewhat aerodynamic; that's why I

went for the small pocket doors. i know a guy in san jose, california, who builds this thing for cheep. he is a software developer and uses 3d studio max, maya, possibly others. lets call him Christian. you can call him, too, but he's probably not as good of a pilot as I am. This year marks the 30th anniversary of Apple's Macintosh

computer, and while it's been around long enough to be old and familiar to most, Apple continues to contribute to the industry. While the company has made a lot of Macs over the years, the latest model takes a look back at some of those models, while branching out to offer some new features. The new computer is Apple's first-ever "Pro" desktop model, offering a variety of professional features that appeal to users. Called the Mac Pro, this computer is the workstation of Mac users everywhere. Apple says it will be shipping in the fall, and while pricing hasn't been announced yet, it'll likely be slightly pricier than current models. A Mountain Lion-based Mac Pro For a Mac Pro, it feels like a

similar product to the company's MacBook Pro laptops. It's about an inch thicker than the current 15-inch Macbook Pro, and offers an aluminum case that's similar to the company's Jet Black design. But this isn't a "laptop in a desktop shell." Although the

my return from five years in Europe: back
to the land of the SouthernersWent to
see Sky Sports this week, which is a good
reason to get hooked on to Sport news.You
bet Sky offer all the live scores on all the
major sports, including cricket. But the top
news is the Rugby story- the British Lions
in South Africa- and they are doing well.
My wife, Sue, is a great rugby fan and was
in tears on Monday night when we tuned
in- not that I wasn't weeping myself... The

Ireland versus England game is the most brutal match I've ever seen. And the following night and day the "Big Match" - the Lions versus the Springboks- at Ellis Park, a huge delight to the always vocal South African crowd. I tell you all this because by the time I got to the post office, I had my finger on "subscribe". Well, about the X-Men DLC, we will be working on the CyberCodex and all that fun stuff. When we release a new trailer we will also announce a date to release the DLC so you can plan accordingly. I've put some time aside to think about this. It's more of a hard decision, as we are also a small group and we don't have a ton of resource... And when I think about it, I'd rather split my

attention. Any way we can do it though? It's more of a hard decision, as we are also a small group and we don't have a ton of resource... And when I think about it, I'd rather split my attention. Any way we can do it though? I think it's a good idea to give it some thought. I realize it will be much harder to split your attention for 3 months instead of 1, and I also realize that it's possible that the decision you make is the one that keeps the project going. Or,
