
Libro El Agua De La Vida John Armstrong Pdf

by wetphamedu. wetphamedu. wetphamedu. in my app when the user starts to write the kerning in the text goes right to the middle, I tried to save the font using: `$fontView = UIFont.firstFont(forTextStyle: UIFontTextStyle.body)` and then using it to set the attributes of the text field but with no success, I have to say that the kerning is set in the first line of the text field in the very beginning. I assume that I need to re-create the font and the text style in order to set the kerning but how can I do it? `func textField(_ textField: UITextField, shouldChangeCharactersIn range: NSRange, replacementString string: String) -> Bool { let updatedText = self.yourTextField.attributedString?.mutableCopy() as! NSMutableAttributedString updatedText.addAttribute(NSFontAttributeName, value: $fontView!, range: range) updatedText.addAttribute(NSKernAttributeName, value: range.length, range: range) return updatedText.typedAttributes.isEmpty == false textField.attributedString = updatedText return true }` A: Font is created only once for the app. You can not change it. There are several ways to create a font depending on your need. For the UI maybe you need to make it depend on the text style. I would rather use PDFKit It is made for this purpose. It has some examples. You can use a library. Or just create the font and the text style in code. I suggest to use font editor like Font Lab After creating the font, you have to use the below code to set the kerning.

```
updatedText.addAttribute(NSFontAttributeName, value: $fontView!, range: range)
updatedText.addAttribute(NSKernAttributeName, value: range.length, range: range) Q:
```
